

Dev-cpp setup

Basic instructions about how to setup develop environment in Dev-cpp.

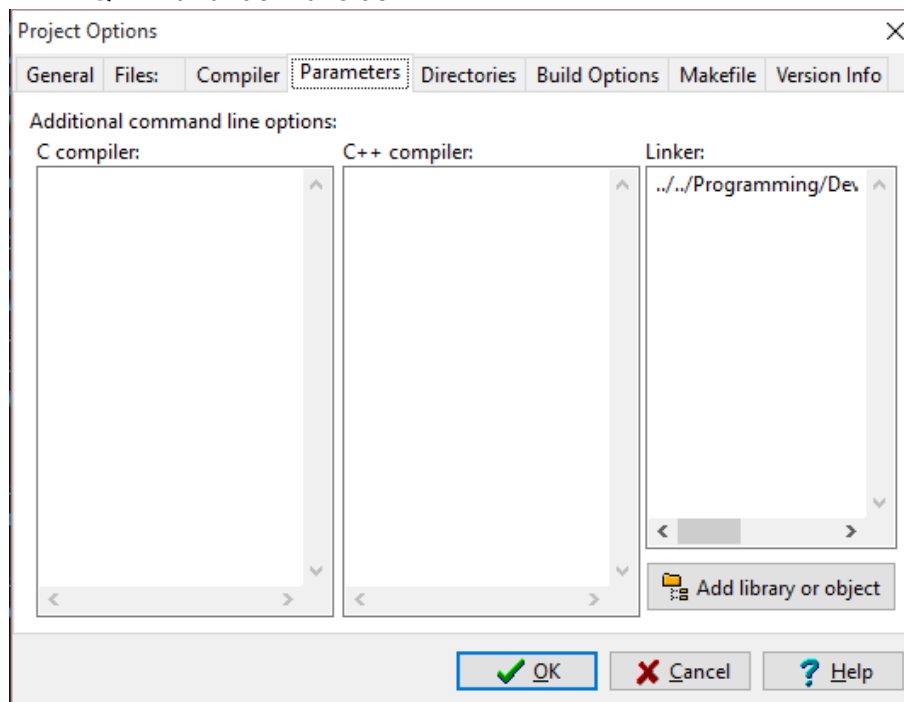

1. Create new project

Select console application, C project

2. Add library

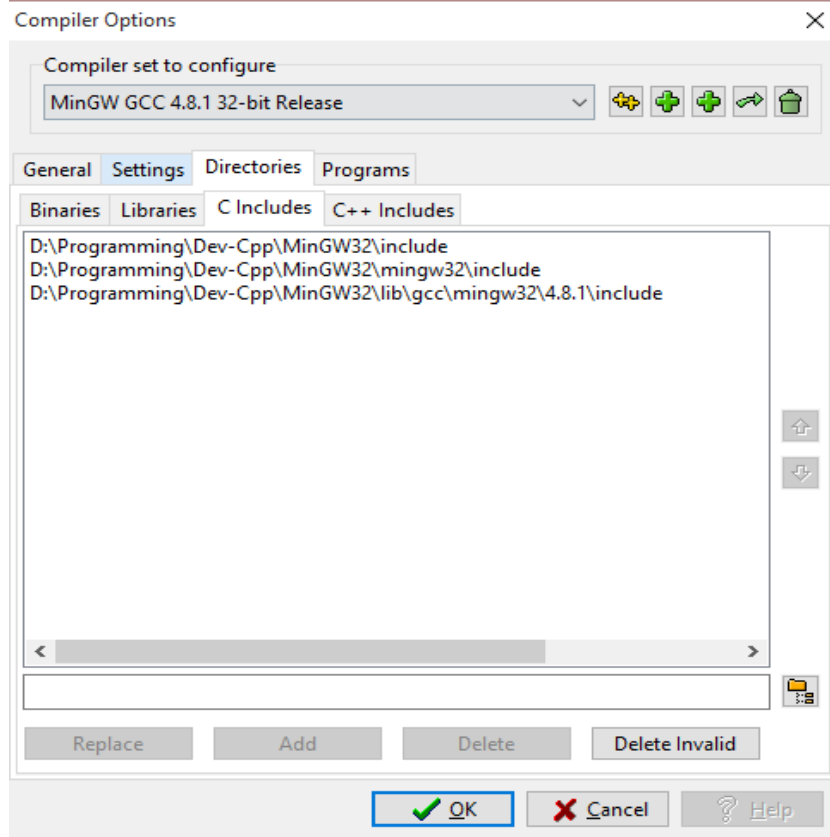

Project > Project Options > Parameters > Add Library or Object > Select "NIDAQmx.lib" under lib folder

3. Add header file

Tools > Compiler Options > Directories > C includes

Add the header file "NIDAQmx.h" in include folder to C includes

4. Include NIDAQmx.h in your code

5. Start coding!
